***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 44-91 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,256,357 in view of Chung et al (U.S. 5,214,656).

The patented claims disclose all the subject matters claimed, except for the modulation schemes applied to the first and second data streams to be "m-PSK and n-PSK" (claims 44-47, 52-55, 60-63, 68-71, 76-79, 84-87), or "m-QAM and n-QAM" (claims 48-51, 56-59, 64-67, 72-75, 80-83, 88-91).

Chung et al disclose a multiplexed coded modulation system (Fig. 1, 2) wherein the two input data streams are modulated using m-QAM and n-QAM modulation scheme. Chung et al further teach that any modulation scheme can be implemented (col. 5, line 51, col. 7, line 27). It would have been obvious to one ordinary skill in the art at the time of the invention to modify the system of the patented claims using Chung et al's teachings to obtain a communication wherein each of the two input data streams would be mapped to constellations having different

sizes using the same digital modulation scheme. The selection of a particular modulation scheme depends on the requirements of a design specification.

***Allowable Subject Matter***

3. Claims 44-91 would be allowable if rewritten or amended to overcome the double patenting rejection(s), set forth in this Office action.

***Conclusion***

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

regarding "the first data stream has data representing the number of signal points of the second data stream assigned in the signal space" in the manner as claimed.
